Contents list of MLA conditions

The Medical Licensing Assessment (MLA) is designed to test the core knowledge, skills and behaviours of doctors who want to practise in the UK.

It lists a **broad range of conditions** with which all doctors should be familiar and these are listed below, along with cross-references to the pages where you will find them discussed, either within this book or the companion volume.

The MLA also expects doctors to be familiar with a **range of different presentations** and a full list of these, and cross-references to the pages on which you will find them discussed, is provided under the resources tab on the website pages accompanying each book:
