Contents list of MLA presentations

The Medical Licensing Assessment (MLA) is designed to test the core knowledge, skills and behaviours of doctors who want to practise in the UK.

It lists a **broad range of presentations** with which all doctors should be familiar and these are listed below, along with cross-references to the pages where you will find them discussed.

The MLA also expects doctors to be familiar with a **range of different conditions** and a full list of these, and cross-references to the pages on which you will find them discussed, is provided within each book.
